INFORMATION ON VIRUSES

Your antivirus program may detect **tomb4.exe** as a virus. This is a false positive due to flep patcher.

So create an exception for tomb4.exe or turn off temporarily your antivirus program.

IMPORTANT NOTES / ADVICES

1. Please, don't delete Pix folder, or you'll miss an important part of the game, and :

- . Diary and Codex need this folder to show you hints, clues, tutorials and a complete story of the demons.
- . You may also encounter crashes in some circumstances, or the impossibility to reload a savegame.

Of course, I'm not responsible of bugs due to missing files.

2. Avoid using Alt+Tab keys while playing the game, as well as switching from one window to another in window gaming mode. It may cause crashes and data loss.

3. If you play with a joystick or a gamepad, don't map its buttons directly in the game command configuration. Instead, use

a program like **Xpadder** or **Joy2key** that will map gamepad buttons to keyboard keys.

Doing this will prevent you from encountering problems I report in the Known Bugs/Issues section below.

4. Each time you see "**New Entry in the Diary**" or "**Page added to the Codex**" during the game, please read carefully all the information. You'll learn many things about how to play this game and also about the scenario, plus a final surprise.

5. Before ending the adventure, you may return into the fortress . Some surprises are waiting for you...

KNOWN ISSUES

1. Sometimes, shooting with the crossbow at a shatter does nothing. Move Lara in any direction and try again or reload a savegame.

2. In one particular room, don't try to swing with a rope/chain inside a wall or you'll miss something.

3. In 2% of the cases, the boss in level 2 may fall down into the pit and then will never be able to get out of it.

You can still defeat it but in an very easy way ;)

4. Sometimes, the final boss is not attracted correctly and doesn't trigger the action. Keep playing, and it should work when it moves again ;)

(...)

(...)

5. You cannot save or enter the inventory while an information text (excepting enemies names) is displayed on the screen.

You'll have to wait 6 seconds for the text to disappear before you can enter inventory or use F5.

This is not a bug but a way to avoid a bug due to TRNG corrupted savegames.

Using a gamepad is a way to pass over this restriction, but it will cause the game to crash when reloading savegames with texts on the screen. See the important notes above.

6. When fighting against Belial, if he kills Lara against a wall, he may throw her outside the map.

7. Attempting to enter inventory or savegame panel while a text is displayed on the screen may cause problems like blocking Lara's walk, forcing you to release and press again the [walk] key between each step. This problem may disappear when a new text appears on the screen.

INSTALLATING THE GAME

Double click on **Install.bat** and follow the instructions.

Windows 7 or Vista users :

. You may have to reduce or deactivate the UAC (User Account Control) to allow the installer to access directories.

. You can do that by opening control panel, and clicking on user accounts.

For a better game experience, please **choose a 32bits screen resolution**, and if possible, in **windowed mode**. This will avoid FMVs problems and bad displayed objects. This game was created and is better displayed at a resolution of 1280x920 32bits windowed mode.

PERFORMANCE TIPS

It is advisable to run this game on a PC with dual core processors of 2Ghz or better.

To take advantage of this game with better graphics, better sounds and a good performance, please follow this :

SOUNDS

- In game parameters, please set music volume to approx. 75% of the effects volume, or else you will miss some important effects during the game.

(...)

(...)

PERFORMANCE

- Close all other programs

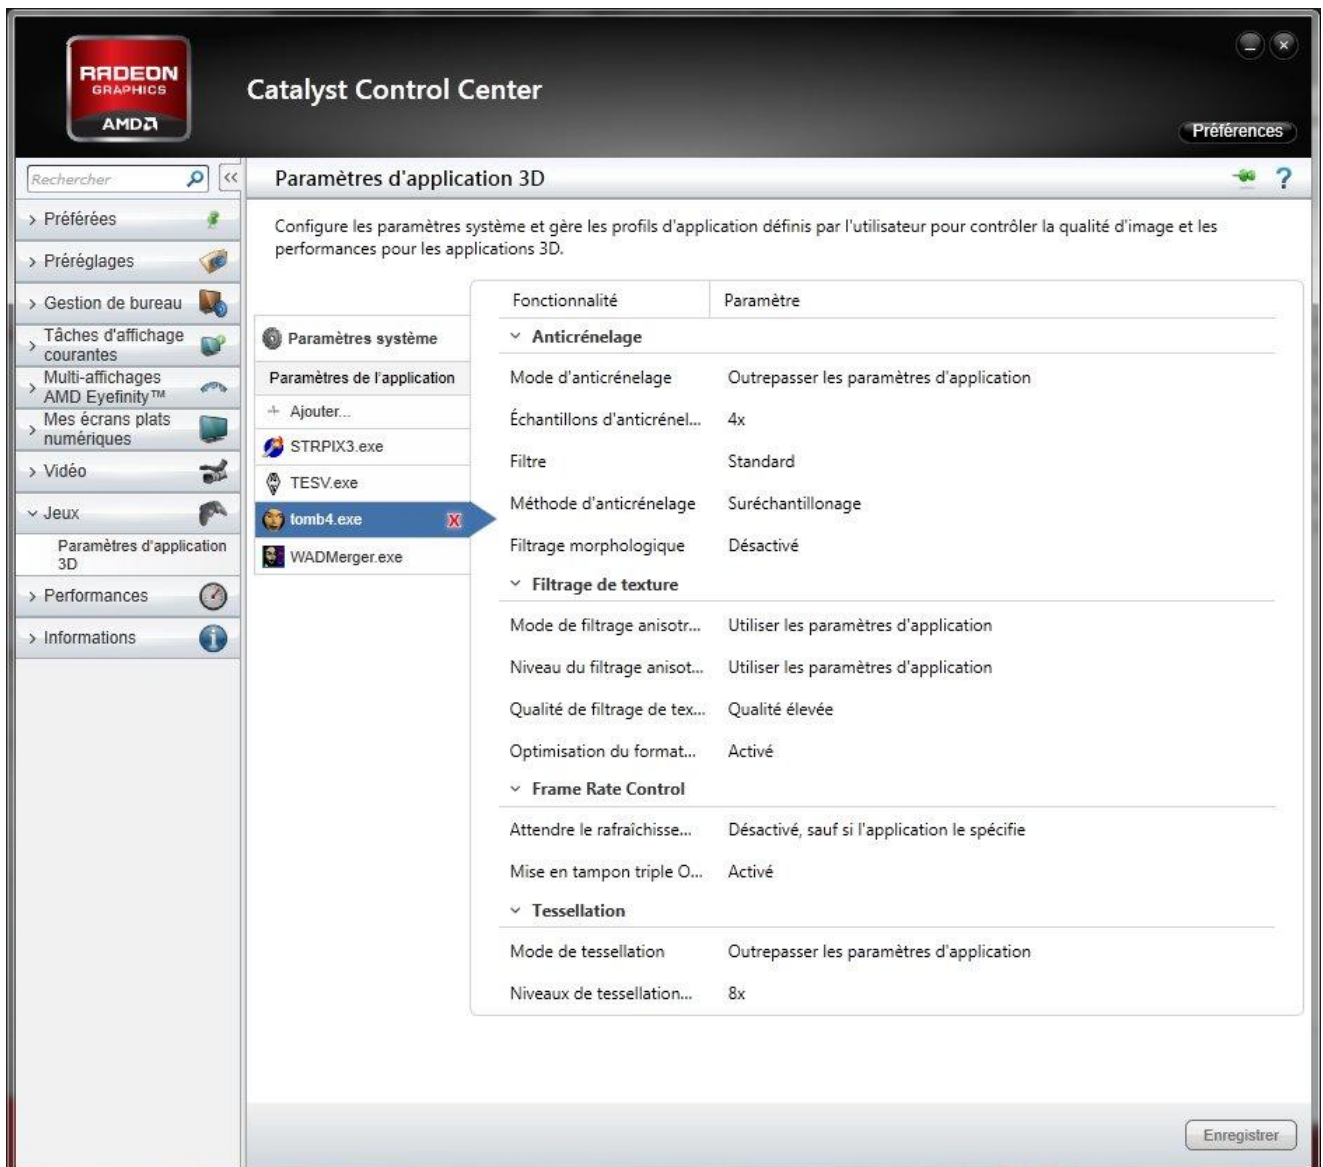

- Windows 7 users : Turn off Windows Aero. To do that you can use "Windows Aero Switcher"

- . scroll down in the main directory of the game
- . double click on Aero Switcher (WAS.exe - White A in a blue square)
- . Go to your Windows task bar notification icons and click on Aero Switcher icon to switch windows aero on/off
- . To close Aero Switcher, right-click on the task bar notification icon and choose exit

- Windows Vista users : Choose a windows classic theme as background with no transparency for windows.

BETTER GRAPHICS

After installation, create a 3D application parameter for tomb4.exe in your graphics card control center, using for example :

LARA'S NEW MOVES (see the Diary in game for further information)

MOVES	KEYS
Ladder to monkey bars	[Action] + [Walk] + [Up]
Jumping up from a ledge to an upper ledge <i>Keep pressing the 3 keys to fast climb on a ladder</i>	[Action] + [Up] + [Jump]
Jumping backward from a ledge	[Action] + [Down] + [Jump]
Entering a crawlspace above	[Action] + [Up]
Jumping out of a crawlspace (if possible)	[Up] + [Jump]
Making a U-Turn on monkey bars	[Action] + [Roll]
Making a U-Turn on the ground	[Walk] + [Dash]

THANKS

Please, see **Credits.txt** file. You'll find it in the mains directory of the game.
