README (UPDATE 1.1)

The update 1.1 of my custom level add the new features of the Tomb1Main 2.0. The features of this update include:

- A New EXE file (Tomb1Main) replacing the old TR1Main. With this new exe, more PCs will be able to run TR1 custom levels.
- 3D objects for ammo, medicpacks and Keys in the map (replacing the original sprites from TR1).
- Bugs fixed from the release 1.0.
- For “**Windowed Mode**” press “**Alt+Enter**”

Despite fixing several issues and bugs from the previous version, this update may cause a small bug at Level 6. The bossfight theme may run earlier than expected, as there was a change in the way the music script works and changed how works in my level.

Important: If you have problems playing this new version or if you want to play version 1.0 with TombAti exe, please download the previous version from this link:
